PROFESSIONAL SUMMARY

Data Analytics student at IIT Patna with hands-on experience in Excel, SQL, Power BI, and Python — building end-to-end pipelines from data cleaning to dashboard development across projects spanning 150,000+ records. Skilled at designing Star Schema data models and DAX-driven KPI dashboards in Power BI, as well as building predictive models using Python and machine learning.

CORE SKILLS

Excel & Reporting: Advanced Excel (Pivot Tables, VLOOKUP/XLOOKUP, Power Query, Conditional Formatting), Ad-hoc & Recurring Reporting

SQL & Databases: MySQL, Joins, Aggregate Queries, CTEs, Window Functions, Views

Power BI & Visualization: Power BI Desktop, DAX (CALCULATE, FILTER, SUMX), Power Query, Data Modeling, Star Schema, KPI Dashboards, Drill-through, Data Storytelling, Data Validation

Python & Machine Learning: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Predictive Analytics, Feature Engineering

Analytics & Tools: ETL, Data Cleaning, EDA, Statistical Analysis, Business Intelligence, Git, GitHub, Jupyter Notebook, Generative AI for Analytics

PROJECTS

Flight Price Prediction System | [GitHub](#) | [Live Demo](#)

Tech Stack: Python, SQL, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Power BI, Streamlit

- Cleaned and engineered **10,463** flight records, **as measured by achieving an R² of 0.8943 and MAE of ₹658.92**, by building a Scikit-learn **Random Forest** pipeline with feature engineering (date, duration, stop-count extraction) and one-hot encoding.
- Developed **30 SQL queries** (aggregations, window functions, CTEs) to analyze airline pricing patterns, **as measured by surfacing insights across 12 airlines and 128 routes** (avg fare ₹9,027, route fares up to ₹79,512), supporting model feature selection and dashboard design.
- Developed 3 interactive **Power BI** dashboards (Airline Performance, Price Analysis, Route Analysis) to communicate and deployed the trained model as a live **Streamlit** web app, **as measured by enabling real-time fare prediction and route-level trend exploration** for end users.

Sales Analytics Dashboard | [GitHub](#)

Tech Stack: Excel, Power BI, Power Query, DAX, Data Modeling (Star Schema)

- Cleaned and modeled **17,560** raw sales records into a **Star Schema**, **as measured by preparing a fully structured, query-optimized dataset across products, dates, customers, and promotions**, by using **Power Query** for data cleaning and transformation within Power BI.
- Built a 4-page interactive dashboard to help stakeholders, covering Top/Bottom 5 products, sales-vs-profit relationship, and average discount by category, **as measured by enabling side-by-side comparison of any two user-selected time periods**, by writing custom **DAX** measures on top of the Star Schema data model.
- Delivered a fully filterable order-level report across 17,560 transactions, **as measured by surfacing sales, profit, discount, and net sales by product, date, customer ID, promotion category, and city**, by designing dynamic visual filters and slicers in Power BI.

LinkaLyze — LinkedIn Job Market Analytics Dashboard | [GitHub](#)

Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn, Power BI

- Cleaned, validated and standardized **123,849** raw LinkedIn job postings, **as measured by resolving missing values across 15+ columns (up to 76% missing in salary fields) and removing 1,368 duplicate records**, by applying mean/median/mode imputation in **Python (Pandas)** — producing a final dataset of **122,481** clean records.
- Delivered a real-time hiring intelligence dashboard, **as measured by surfacing an average salary of ₹91,965.83 across 6 experience levels and 5,000+ locations**, by building an interactive Business Intelligence Dashboard with dynamic slicers for pay period, work type, and posting domain.
- Identified the highest-paying job titles and top hiring companies (e.g., Marketing Director, Liberty Healthcare), **as measured by ranking companies and roles by aggregate maximum salary**, by building DAX-driven ranking visuals in Power BI.

INDUSTRY SIMULATIONS

Tata Group — GenAI Powered Data Analytics | [Forage](#)

Jul 2026

- Performed exploratory data analysis, generated business insights and communicated analytical findings using Generative AI-assisted workflows.

JPMorgan Chase & Co. — Quantitative Research | [Forage](#)

Feb 2026

- Built quantitative pricing models and performed credit risk analysis using FICO segmentation under simulated financial scenarios.

Deloitte — Data Analytics | [Forage](#)

Jan 2026

- Conducted data cleaning, EDA, visualization, and forensic analytics in Excel and Python to generate client-ready business insights.

EDUCATION

Indian Institute of Technology, Patna

Aug 2024 – Expected 2027

B.Sc. in Computer Science and Data Analytics (Hybrid) | CGPA: 8.8

Dr. A.P.J. Abdul Kalam Technical University

Sep 2024 – Expected 2028

Bachelor of Technology, Computer Science Engineering | CGPA: 7.7

CERTIFICATIONS

Computer Science and Data Analytics Foundation — [IIT Patna](#) | Data Analytics Bootcamp — [UDEMY](#) | Python — [UDEMY](#)

ACHIEVEMENTS

Built 7+ end-to-end Data Analytics Projects | Ranked 22/100+ participants in HackDays, IIT Patna Hackathon | 4-Star Python Coder at HackerRank
